SKILLS

Technical Skills

Java 17 | Microservices Architecture | React.js | Angular Framework | CI/CD Pipelines, Docker & Kubernetes | AWS Lambda, EC2, S3 | ELK Stack | Elasticsearch | Redis | Apache Kafka | Spring Caffeine

Database

Microsoft SQL Server | Oracle

Framework

Hibernate & JPA | OAuth2 & Spring Security | Spring Boot, Spring MVC , Spring AOP , Spring Core

LANGUAGES

English: Fluent | German: Learning A1

SUMMARY

Lead Java Developer with 11+ years in enterprise software engineering, driving a 75% reduction in production outages and protecting $360K/year in revenue through cloud-native microservices modernization. Trusted technical advisor to engineering and product leadership, skilled in distributed systems, Kafka-driven design, and CI/CD automation.

LINKEDIN RECOMMENDATIONS

- "I worked with Yogesh at TCS and was impressed by his technical capability, ownership, and dedication to quality delivery." ~ (source: LinkedIn)
- "I have been working with Yogesh for many years; he has a track record of delivering GETPAID projects that significantly improved user experience." ~ (source: LinkedIn)

WORK EXPERIENCE

Software Engineer Team Lead

Mar 2026 - Present

Qualys, Pune

- Cut production outages from 4 a month to 1 by redesigning the legacy monolith into distributed, cloud-native microservices with independent scaling and fault isolation.
- Lifted system throughput 2.5x by replacing synchronous REST calls with Kafka-based asynchronous messaging between services.
- Curbed late-stage security findings from 8-10 to 2-3 per release by embedding security review into architecture discussions and code reviews from the start.
- Compressed new-developer onboarding from 6-8 weeks to under 4 by introducing coding standards, architecture documentation, and structured mentoring.
- Built and shipped React.js pages/components for 4-5 customer-facing features on the Qualys platform, integrated with backend Spring Boot REST APIs.
- Optimized API response time from about 450 ms to 90 ms on read-heavy endpoints by adding a two-level cache, Spring Caffeine in-process for hot data and Redis as the shared distributed cache, with TTL and eviction policies tuned per data type.
- Lowered search latency from about 3 seconds to under 500 ms by storing asset documents in Elasticsearch and designing optimized Elasticsearch queries for fast retrieval.
- Engineered an inverted index with bitmap-based lookups across millions of records, reducing search time from about 8 seconds to under 300 ms, so filters run as fast bitwise operations instead of full scans.

Senior Software Specialist

May 2025 - Mar 2026

LTI Mindtree (Citibank Client), Pune,India

- Trimmed critical production bugs from 7 to 2-3 a quarter by building 1:1 production-parity staging environments and enforcing code-review gates before merge.
- Streamlined deployment turnaround from 9 days to 5 by re-architecting the CI/CD pipeline with Docker containerization, Kubernetes orchestration, and parallelized test execution.

- Migrated 10 hard-coded DB credentials across 3 microservices to HashiCorp Vault with per-service access policies, cutting hard-coded-secret audit findings from 6 to 0.
- Secured 40+ REST endpoints across 3 microservices with Spring Security OAuth2/JWT, closing 5 access-control findings identified in the bank's VAPT/pen-test.
- Improved Angular page load time from 5s to under 2s via OnPush change detection and lazy loading, and built a reusable component library saving 2-3 days per feature.

Senior Software Specialist
Oct 2019 - May 2025

FIS Global, Pune,India

- Designed and implemented an event-driven serverless invoice pipeline on AWS Lambda and Amazon S3 that automatically ingests and organizes scanned invoices by date and vendor, cutting processing time from 6-8 hours to 2-3 hours.
- Strengthened SLA compliance to 99.5% by optimizing slow-running SQL queries and standardizing logging and exception handling across services.
- Raised CSAT from 74 to 90 by instituting mandatory design and code reviews and driving root-cause analysis of systemic defects as Technical Lead.
- Brought annual attrition down from 24% to 10% by partnering with HR on root-cause findings and building structured mentorship and code-ownership rotation.
- Re-engineered the data-access layer with asynchronous processing, connection pooling, and back-pressure handling, decreasing transaction latency from 1.8 seconds to 650 ms.
- Eliminated an estimated $25K a month in manual reconciliation effort by designing idempotency keys and reconciliation checks for Kafka-based transaction messaging.

Senior Software Engineer
Dec 2014 - Jun 2019

TCS, Mumbai,India

- Elevated on-time settlement completion from 75% to 96% by automating NEFT, IMPS, Merchant, and Settlement workflows with Quartz Scheduler.
- Minimized client-reported integration issues from about 12 to 4 tickets a month by standardizing API design, authentication, and documentation on the AKANA platform.

EDUCATION

BE – Computer Engineering: Computer Engineering
Jun 2010 - Jun 2014

73%

PIIT, New Mumbai ,India

CERTIFICATIONS

OCPJP - 17 — Present

Certified Kubernetes Application Developer

AZ-900 and AWS Certified Associate Developer — Present

ACCOMPLISHMENTS

- Star Performer Award – FIS (2023) for software delivery excellence and technicalcontribution.
- Employee of the Month – FIS (2022) for ownership and consistent project delivery.
